**On the cover :** Iron River Brook trout with Bacterial Kidney Disease.

The top left one showed the swollen kidney with multiple creamy- whitish nodules (N). The top right one showed HE stained slide of kidney with a severe granulomatous reaction that is replacing kidney tissues of a 3 years old Assinica brook trout. The bottom left one showed kidney tissue of Iron River brook trout fingerling with heavy *Renibacterium salmoninarum* infection stained by an anti-*Renibacterium salmoninarum* antibody based streptavidin-immunoperoxidase immunolabeling. The bottom right one showed kidney tissue of Iron River brook trout fingerling with heavy *Renibacterium salmoninarum* infection after enhanced antigen retrieval procedures using Alkaline Phosphatase Red and goat anti-*Renibacterium salmoninarum* antibody and counterstained with Mayer's Hematoxylin (Blue background). See *An Overview on Bacterial Kidney Disease* by Eissa AE & Elsayed EE, page 58 – 76 in this issue.
