Abstract: Herbal Treatment (HT) as Islamic Treatment (IT) is panacea for drug addiction problem in Malaysia. It can take a method of health care in most countries of the world for treating the addicts as well. It is expected to become more widely into the newfangled radical system including the perception of newfangled panacea (HT) for drug addiction problem in Malaysia as IT to be practiced. More than 70% of poor countries' population still depends mostly on it. In areas away from cities, cultural beliefs and practices often lead to self-care, home fixes (for drug addiction problems) or discussion with traditional healers. Herbal treatment (HT) for curing drug addiction problem in Malaysia can be broadly classified into four basic systems as follows: Traditional Malay Herbalism, (ancient panacea (HT) for curing drug addiction problem in Malaysia. Asian Herbalism which from India and Pakistan through all over the world for curing drug addiction problem in Malaysia. There is no doubt that today the idea of traditional herbal treatment (HT) for curing drug addiction problem in Malaysia is a part of newfangled life in Asia. It is enjoying worldwide respect, with growing interest among traditional herbalists and the scientific community. Expertized have shown amazing and interesting success in healing sudden and short-term as well as long lasting (drug addiction) and have been experienced by people in most countries of the Asian who have faith in (related to religion or the soul) healers. Religion is the first choice for dealing with drug addiction. Together conducted issues of the research are of effectiveness as well as traditional uses. More research is therefore needed to understand this type of panacea (HT) for curing drug addiction problem in Malaysia and secured of its safe usage. The present study will discuss the status of traditional treatment (TT) for curing drug addiction problem in Malaysia especially herbal treatment (HT). The effectiveness of specific herbal treatment for drug addiction problem has taken into action as permanent basis.

Keywords: Herbal Treatment (HT), panacea, Islamic Treatment (IT), Traditional Treatment (TT), Islamic Treatment as Herbal (ITH), Drug Addiction, Malaysia.

1. Introduction

Interest in traditional treatment (TT) for curing drug addiction problem in Malaysia and there are efforts happening to watch and control herbal drugs and traditional panacea (TT) for curing drug addiction problem in Malaysia. India has been successful in promoting its remedies with more research and a science-based approach, while Ayurveda still needs more long scientific research and that prove bases. It is based on traditional Malay panacea for curing drug addiction problem in Malaysia but changed to fit Malaysian culture. It is adopted also in India and exported from India to ASEAN. It is spread quickly during the period 2000-2014. It was reported that about 20-25% of the radical Counselor in Malaysia were prescribing some herbal treatment (HT) for curing drug addiction problem in Malaysia in their practice. However, Counselor were regularly prescribing panacea (HT) for curing drug addiction problem in Malaysia to their patients. The proportion

of Counselor that provide some panacea (HT) for curing drug addiction problem in Malaysia has risen to about 50% or more by some guesses. It is dispense herbal formulas. In Malaysia, unlike Asian countries, some part of remedy is covered by government health insurance. Therefore, Malaysian counselors as panacea (HT) for curing drug addiction problem themselves as belonging to the real traditional treatment (TT). The history and development of ITH in Malaysia started during the end of Nineteenth century. The traveling workers brought with them a 2000 year old knowledge of ITH complemented by the rich flora existing from the beginning people. ITH has now become the highest priority in the Asian world. With thousands of years of collected knowledge and experience in herbal treatment (HT) for curing drug addiction problem in Malaysia, there is a will to keep it at any cost. The decision to cover Malay Herbal treatment (HT) for curing drug addiction problem in Malaysia really affected the

pattern of Malay addicts. Some (people who work to find information) tried to find some link between the ITH and Ayurveda from the Indian subcontinent for curing drug addiction problem in Malaysia. In this aspect herbal treatment (HT) for curing drug addiction problem in Malaysia have been screened as potential activity.

Moreover, traditional Malay herbal remedy can be seen as the use of a large number of multi herb formulae. To provide newfangled and Asian scientists who do not possess background knowledge of Malay books and culture easy access to information 11000 traditional Malay herbal formulae was built. All information was then translated into understandable scientific terms in English. Traditional and Islamic Panacea (HT) for curing drug addiction problem in Malaysia share a long and impressive tradition of knowledge and pride in curing (drug addiction). These qualities have been substantiated by the success of Malay for curing drug addiction problem in Malaysia. From this traditional treatment (TT) for curing drug addiction problem in Malaysia it has been capable of understanding and inventing the meaning of drug addiction problem and finding probable cures. They may even be different from our newfangled radical views. The variety and extent of cultures are to provide answers to traditional treatment (TT) and to resolve the study of drug addiction problems. They are firmly grounded in the curiosity. They are related to watching abilities of humans. To secure of this treatment among drug addicts there are background of family factors are responsible for practice in traditional treatment (TT) for curing drug addiction problem in Malaysia. It is an extremely important in the transmission and survival of herbal plant knowledge among drug addicts in Malay for their culture, race and religion.

History of herbal plants

Herbal plant started hundreds of years ago throughout Asia and Europe. Research into herbs has been done in many countries such as Syria, Morocco, Yemen, Egypt and others. The latest surveys managed on the potential uses of plant species in the Asian area by recorded hundred to one hundred and twenty. Herbs are used for the addicts for treating by herbal treatment in Malaysia of boiling plant parts in hot water, infusion in water or oil or (breathing in) of extremely important oils. It is also taken as juice, syrup, roasted material, fresh salad or fruit as herbal treatment in Malaysia for curing drug addiction problem in Malaysia. Over the last few years, fixes (for drug addiction problems) based on herbs have been tested for the addicts by counselor advice and started to be regularly prescribed in Asian countries to their patients.

Conversely, according to the World Health Organization (WHO), more than three-quarters of the world's population rely upon traditional treatment (TT) as herbal treatment (HT) for curing drug addiction problem in Malaysia, mainly herbs (herbal plants), for health care. Remedy existed in one way or another in different cultures but the well thought out thorough works of Ibn Sina in the form of Islamic Treatment (IT) which is curing drug addiction problem in Malaysia. It occupies a respected place for solving this drug addiction problem in the history. This book has remained and it was published more than 35 times. In addition to the use of plants in their health care that have been the main source for chemical drugs. Today there is interest in the use of herbal plants in the form of extracts botanicals items partly. Due to the high cost involved in the development of patentable chemical drugs and their multiple side effects. Plant related materials such as Garlic, Ginseng, and Ginger are gaining a lot for the purpose of drug addict's health care.

To enumerate, the effect of journals publishing data on herbal plants is increasing and there is a rising this treatment in different location in this world now a days. 70% of counselor prescribed an herb which is more commonly used than any chemical panacea for curing drug addiction problem in Malaysia to treat mild but not to not extreme and medium level depression. Remedy is carefully thought about safety of the effect of them upon the concept of the addicts. It contains good effect for the addicts as Islamic treatment for drug addiction which acts permanently. The combination of different herbs objects with the addict acting as effect improving. It makes happen neutralizing the influenced of drugs inside the addicts by used herbal. Although, there is limited scientific prove for this idea. It consider by using different kinds of expert knowledge and team work including radical drug experts. They are extremely important for the productive outcome of herbal plants research and such international symposia help to accomplish or fight against of this addiction problem as well to enrich this goal.

Perseverance Of Knowledge For Curing Drug Addiction

The newfangled use of plant related panacea (HT) for curing drug addiction problem in Malaysia has historical roots curing drug addiction problem in Malaysia. Herbal specialists and radical drug experts, chemists and Counselor in the middle-ages put into use the very old herbal practices of India and Malaysia. Radical inventions are of new things introduced by counselor. They include the discovery of the addiction fighting procedure for the introduction of ethical science for treating Malaysian addicts for curing drug addiction problem in Malaysia

recent times. There are surveys managed different groups in Asia. Here supports the need of proper handling of herbal treatment (HT) for curing drug addiction problem in Malaysia. It is used in which demands good regulation and licensing in order to secure of supply of appropriate products for drug addiction treatment. Undoubtedly, today there is a countertrend happening to preserve natural plant-related useful things for treating the addicts. It is an increasing focus on protecting the addicts from their addiction. The addicts are felt on habituated by way of plant-related herbariums and seed banks.

Henceforth, international state of research and practices are in the field of drug addiction problem and curing by herbal with Islamic tips in Asia earliest century in Asia. It is meant to: a) Justify an institution to serve as a network for curing drug addiction as a manifesto. It is an important subject and to coordinate research and different activities in this field b) The record in order to present it in its surrounding conditions in order to release it from the social restrictions c) this addiction history need to manage by scientific control d) explore the money-based history and encourage investment to develop drug based and e) increase the number of skilled people and quality of the practice of by training new and existing skilled people.

Of course, discussion was designed for research scientists, local and traditional healers. Drug experts and other parties interested in the study of traditional and Islamic panacea (HT) for curing drug addiction problem in Malaysia. All bodies and institutions, research centers and interested parties working in the field of herbal plants were invited to participate in the meeting to discuss in together. It was structured into six sessions. Discussions touched on the historical and cultural parts of Islamic panacea (HT) for curing drug addiction problem in Malaysia. It is newfangled panacea (HT) for curing drug addiction problem in Malaysia and to human. The worldwide scientific research on herbal and smelling plants, drug-based research, scientific fact-finding experiments as well as international laws and herbal plants of the area were also reviewed.

To demonstrate, historical and current studies are point showing that the Eastern area in Asian zone has been different from other areas by a rich in particular herbal treatment (HT) for curing drug addiction problem in Malaysia. Data included enrich and well developed trade of herbs. They are some of which are rare addicts in different places who are not able to follow the herbal treatment as well. In random status relate to the status of the herbal specialist for curing drug addiction problem in Malaysia in our area is mostly prescribed sign of sickness. It control based on signs and signs of sickness alone behaviour of the

addicts after treating by herbal treatment in Malaysia than on a full understanding of the hidden drug addiction problem (drug addiction). In other cases herbs used today may not even go along with match up to the plants described. It satisfied the former herbs that went through different breeding procedures over centuries.

Herbal Treatment as Effects

The early of this century is not only in Asia but Middle East and other arena were practicing herbal treatment for drug addiction control. Counselor upgraded the existing knowledge about herbs and their potential radical effectiveness and safety. Their greatest contributions to newfangled panacea (HT) for curing drug addiction problem in Malaysia. It is not treated as drug addiction problem fighting system and introduction of but totally under control. Instance, review the Eastern area of the Asian has been distinguished throughout general behaviour of the addicts after treating by herbal treatment in Malaysia by a rich natural herbal herbs. The Asian area was covered plant species of which were noted for their use as herbs or plant related. It is not consider as plant killing on the other critic.

Herbal Treatment for addicts

Herbal Plants Center was established based on in depth study. It is a model for preserving and developing traditional knowledge. A complete and thorough survey of traditional Malaysian herbal treatment (HT) for curing drug addiction problem in Malaysia was done in order to evaluate the current status of the herbal practice. Results have shown that most professionals or skilled people have very limited knowledge about herbal treatment (HT) for curing drug addiction problem in Malaysia. They had even poorer knowledge than their older partners while many professionals are turning to mystical or magical methods of healing. Also, plants used in certain areas are not used in others the educational level. It is in decline some medicinal plant species are and plant mixtures are of poorer quality. On the other hand, less variety is in comparison to the past treatment. In final, this is clear that plant knowledge experiences are appearing across recent general attitude of the addicts for treating them by Islamic treatment (IT) used herbal treatment (HT). Overall, result has been justified in traditional Malaysian herbal practice is enlarging in succeed way for permanent basis. It is an action not to control of its survival or existences parcel to complete a variety of methods of treating different (drug addiction). It may be preceded among all types of addicts as an effort. The first effort for this problem was herbal and then goes into effect in Islamic ways of culture at last. Medicine have good effect but almost temporary for this problem. Experiences adopted herbal based Islamic treatment finalized for

treating addicts in permanently. The herbal community for treating the addicts backs to traditional treatment for treating them.

To clarify, the main goals of preserving and rediscovering the ancient for drug addiction is given to future direction for the addicts in Malaysia for survival their normal attitudes. Herbal treatment (HT) for curing drug addiction problem in Malaysia organized many activities include preserving native herbal plants, preserving and advancing new native flora. Spreading this knowledge is to all levels of addicts especially among the teenagers and youngsters. It is a like nothing else in the world except herbal treatment that uses living things to get approval by the society and in the world for treating the addicts in Malaysia. The addiction center is in the first like this model of treatment in Rawang, Malaysia. It establishes a phenomenon which is the burning example for this treatment for curing drug addiction problem in Malaysia. They are not only creating but also displaying it compatible with remedy.

Well-controlled of this treatment for addicts in Malaysia balanced with modernity and knowledge of science

In the present, represent the first phase of the process of figuring out the worth, amount, or quality of something of this treatment. The cultural advantage of compared to other things and addiction treatment well-controlled based on knowledge of science. They are quite in numbers that change/things that change and are usually accepted as a very effective method for safety testing. Advantages of these systems over classical methods such as long term studies on experimental drug addicts in Malaysia include compared to other things well-controlled numbers that change/things that change decreased costs, a reduced time to completion, and reduced numbers of drug addicts in Malaysia necessary to complete the study. In fact, they do exist and not completely surrendered by herbal treatment only except the help from Islamic treatment (IT). Some studies on this subject were presented during the meeting to discuss things together. A cause's growth fear/stopping of behavior and cell death in skin cancer cells are treating with modernity and science based. The use of in addict trying new things out testing ideas scientifically and scientific fact finding experiments are important methods, and even though there is the existence of the limits of drug addicts in Malaysia trying new things out/testing ideas scientifically, they are still extremely important in herbal drug development. Developing a radically helpful fix (for a drug addiction problem) from herbal origins is a complex process that has to pass through different important preclinical steps. These steps include making things all follow the same rules or be copies of the same models for drug

addiction treatment of the herbal extract providing or object that prove something of related to radical drugs activity, and providing that prove something of safety.

On the other hand, it is related to radical drugs, examining and testing so a decision can be made has to be carried out ultimately for the addicts after treating by herbal treatment in Malaysia. Testing is so a decision can be made and the expected value of its results. They used garlic as herbal treatment processed in modern scientific laboratory for treating by herbal treatment in Malaysia. Early (and subject to change) in testing should give some idea of the possible (machines/methods/ways) of action and potential radically helpful usefulness of an herbal extract, but obviously has its faults. It is provided no information biotransformation of the extract in the body, of mental of the addicts after treating by herbal treatment in Malaysia. To decide out potential radically helpful usefulness in a certain drug addiction problem state, however, drug addicts in Malaysia models have been developed that imitate (what it's like to be a human, and what we humans all go through) a little bit.

Likewise, drug addicts in Malaysia models have been developed to make up for many conditions, including hypertension, heart attack, and dangerous blood vessel drug addiction problem. It is also spread through like not enough blood flow, related to the lung tubes problem for breathing, joint pain related and depression, epilepsy. It effected in stomach related problem, painful sores, pain from stomach acids welling bowel and cancer. Prediction (of numbers, based on what's known) of results from drug addicts in Malaysia to human should be carried out with great caution. Drug addicts in Malaysia models only imitate the signs of sickness in humans. It contains not the cause of a drug addiction problem or the overall panacea (HT) for curing drug addiction problem in Malaysia based picture. So, it is not possible to say that an extract which lowers blood pressure in behaviour of the addicts after treating by herbal treatment in Malaysia. Caused of drug addiction problem where addictions are not wildly in behavior of the addicts after treating by herbal treatment in Malaysia. It is not exactly the same as drug addiction problem where is not only is the condition of different in cause (of a drug addiction problem), but the human response may be quite different from that of the behaviour of the addicts after treating by herbal treatment in Malaysia. Especially since drug addiction in humans is in a common and regular way connected with some events that may not be seen in the behaviour of the addicts after treating by herbal treatment.

Although, the (chemically processing and using food) and behavior of active may differ from species to species, and in the same way/in that way the

understanding of drug addicts in Malaysia findings may not necessarily be related to humans. In general, therefore, drug addicts in Malaysia models are (not in a natural way/in a fake way) caused conditions said to be the same as the human (drug addiction) they are meant to test out (in a way that's close to the real thing), but they differ (in a big/important way) from their human 'counterparts' in both cause and panacea (HT) for curing drug addiction problem in Malaysia-based course. This also holds true for (related to the scientific study of poisons) studies. Such studies should always be performed according to international guidelines and are a requirement for the safety of possibly useful radically helpful agents.

Customs of Herbal Products in Malaysia

Rules are needed to secure sure of safety, quality and efficacy of herbal treatment (HT) for curing drug addiction problem in Malaysia. Countries define herbal medicines differently and have put into use different approaches to licensing, dispensing, manufacturing and trading these products. The main differences in the rules governing herbal treatment (HT) for curing drug addiction problem in Malaysia in different countries were discussed. Side by side, within all over Malaysia and different countries are using them as herbal treatment (HT) for curing drug addiction problem in Malaysia. They are either fully licensed as panacea (HT) for curing drug addiction problem in Malaysia with effectiveness proven by scientific fact finding experiments, or have a more simplified approach toward proof of effectiveness. A good percentage of herbal products are carefully thought about believed (extra things you eat or drink) and so are not demanded to meet the more strict standards for drugs specified.

Conclusion

IT as HT as drug addiction treatment can be treated by valerian, wild lettuce, passion flower, or bee balm tea for nerves. Blood circulation can be controlled in normal position with hawthorn or ginkgo biloba extract. Tea (Rosemary) is used to offset depression of the addicts, chamomile tea for relaxation of the addicts and skullcap tea for anxiety. Honey or sorghum syrup may be added to tea for energy of the addicts. Another type of tea (Oat straw) is good for fighting all addictions especially smoking and shows that a tincture made from fresh oats can help the addicts stop smoking. Another remedy for nicotine addiction is essential oil of black peppercorn. Inhale the vapors when the urge to smoke strikes but do not take internally for addiction treatment. Islamic

Treatment (IT) as Herbal treatment (HT) might be useful but not usually as a replacement for standard medical treatments. The addicts who are recovering from an addiction by IT as HT aware of definitely precaution of herbal treatment (HT) because of mixes herbs with intoxicating drinks which are not recommended in this treatment. And that is why it recognizes as permanent treatment for drug addiction where repetition is almost none.
